Projects

E4 Connect Mobile Application

A communication platform between an agent and a client managing scattered information in CRM at E4, not being able to track complaints and remarks from the clients. A query managing system is implemented to allow the clients in a banking space to log their complaints and track the lifecycle of their complaints. Xamarin.forms, C#, Firebase and Microsoft SQL server technologies were used.

r2se Web Applications

Pronounced as "A re thuse", "let us help" translated to English, a platform for a job seeker and a potential recruiter to absorb the job seeker and give them employment to enhance their skills as interns, learnerships, or even permanent jobs by the use of resume, certificate(s) and a 2 minutes video stating who you are and what you specialise in. Technologies used were Python and Django.

Question Paper Generator Web Applications

A web-based application that assists lectures in compiling a question a question paper instantly so, with correct question paper format, questions and templates using PHP, Bootstrap, HTML, MySQL and Xampp technologies.

ICEP Web Application

A web-based application for ICEP community engagement program to accept applications for internship via their website rather than using email inbox, a centralised system managing all the applicants application forms and also admin giving feedback to the applicants within the system. Angula 5, Epxress and Node JS technogies were used.
